expanded, state-of-the-art
facility in Toronto

DESIGN & FUNCTIONALITY

Customers are increasingly knowledgeable on the accessories and ancillary products available to enhance their transformers. Northern Transformer's engineers and account managers are always available to share our experience and discuss the customer's project. Our design incorporates each aspect of the customer's specification while maintaining a focus on end costs and functionality.

TESTING & CERTIFICATION

Northern Transformer is proud to be ISO 9001:2008 and CWBW47.1 certified and will comply to the standards required by our customers and local jurisdictions.

Northern Transformer has invested in state-of-the-art test capabilities. We offer a full range of testing compliant with ANSI C57.12 and CSA C88-M90 standards, as well as, specialty testing such as lightning impulse, sound, heat run, partial discharge and SFRA.

MARKETS

RENEWABLES

The fastest growing sectors in our customer portfolio are Wind, Solar, Energy Storage and Small Hydro.

- Grounding transformers
- Wind & Solar padmounts
- Generating step up transformers
- Specialty station service transformers

INDUSTRIAL

Northern Transformer designs achieve product longevity and competitive costs for this cost-sensitive market segment.

- Step down transformers
- Grounding transformers
- Autotransformers

UTILITY

The North American Utility market is a core part of our business. Since 1981, Northern Transformer has supplied the NA Utility market over 500 transformers.

- Substation transformers
- Generation step up transformers
- Autotransformers
- Specialty station service transformers
- Single phase transformers
